

Ethana.

The unified AI security suite for the *enterprise* · one platform across every surface AI runs on, today and as the surfaces multiply.

What *Ethana* is.

A single suite that does for AI what the rest of the security stack does for everything else · *but designed natively* for prompts, models, agents, and tool calls.

Every enterprise now has hundreds of AI tools their employees use, plus a growing set of AI apps and agents the company builds itself. None of it is covered by traditional security tooling. **Ethana is the unified suite that fixes this** · it *discovers* every AI tool and agent, *red-teams* them continuously, *governs* them with one policy at every surface, and *operates* in our cloud, in the customer's VPC, or on-prem.

Enterprise AI is invisible, ungoverned *and expensive.*

Seven conversations are happening in every enterprise right now. None of them have an owner.

- 01

Shadow AI is everywhere.

Hundreds of SaaS AI tools have crept in through the browser, the IDE, and the SaaS sign-up page. The CISO has no inventory and no control. Sensitive data leaves the building one prompt at a time.
- 02

SaaS AI subscriptions are climbing fast.

Employees use company-paid ChatGPT, Claude, Copilot, and Gemini subscriptions all day. There is no per-user attribution, no quota, no way to see which team is burning the spend or whether the licence is even being used.
- 03

Developer tools are unmonitored.

Cursor, GitHub Copilot, Claude Code, Aider, Codex. Engineering is the highest-spend AI department and the most invisible. Every developer has direct API keys; nobody can see what code is being shared with which model, who pays for what, or whether secrets are being leaked into prompts.
- 04

Agents and MCP tools are exploding with no audit trail.

Agents call internal tools autonomously. MCP servers ship without provenance. When something goes wrong there is no record of who did what, with which tool, on whose behalf.
- 05

Account management is leaking value.

When an employee leaves, their accounts in ChatGPT Enterprise, Microsoft Copilot, Cursor, and a dozen other AI vendors stay active. Licenses are dormant, accounts are orphaned, and the offboarding gap is a security risk.
- 06

Compliance pressure is real and rising.

EU AI Act enforcement, ISO 42001 audits, and board-level AI risk reporting are now in scope. No tool produces the evidence end-to-end. Customers will ask for it; the board will be asked for it.
- 07

Agents can't use user IDs but most do.

When an AI agent acts on behalf of an employee, today it inherits the user's full identity and permissions. There is no audit trail distinguishing agent action from human action, no way to scope what the agent can do, and a compromised agent is a compromised user. AI agents need their own identity non-human identity (NHI) with ephemeral, scoped tokens.

Three product lines. *Shared platform* underneath.

Each line covers a different slice of where AI happens. Five platform services serve all three.

Gateway.

A single front door for every model call your applications make.

WHAT
OpenAI-compatible LLM gateway. Multi-tenant. Native · no third-party dependency.

PROVIDES
Routing · cost control · per-call audit · user attribution.

STATUS
In production. CallTrace and cost capture shipped.

Guardrails.

Inline content inspection on every prompt and every response. Bidirectional, sub-200ms.

WHAT
Six native scanners. Pulls signed Policy bundle from Governance.

WHY SHARED
Every traffic-touching product needs it · one engine, one policy, four callers.

STATUS
All six scanners in production. Sub-200ms p95.

Red Teaming.

Continuous attack simulation against models, LLM apps, and agents · manual, in CI/CD, or auto-triggered when Discovery finds something new.

→ TRIGGERED BY

Console
manual on-demand

CI/CD Gate
ethana eval · GitHub Action

Auto-trigger
from Discovery findings

Scheduled cron
continuous run

→ PRODUCES

Finding
Risk Register

Suggested policy rule
Governance

CI/CD block
PR fails

WHAT

An attack runner. Same engine targets a model, an app, or an agent.

PROVIDES

Finding → policy rule loop · continuous coverage · CI/CD gate.

STATUS

Orchestrator + 21 OWASP probes in production. CI/CD gate in build.

MCP Broker.

Hosts MCP tool servers. Brokers every agent tool call · identity-scoped, allow-listed, audited.

WHAT
Registry + hosted runtime + identity broker. Every tool call recorded.

AGENT IDENTITY
Every agent gets its own non-human identity (NHI). Short-lived, scoped tokens via OAuth 2.0 Token Exchange / SPIFFE patterns. Agents never reuse the calling user's credentials.

STATUS
~8,000 lines in production. Per-call tracing shipped. NHI & ephemeral tokens in build.

AI Firewall.

Network-layer control over which AI apps employees can reach and what can flow to them.

→ GENAI TRAFFIC FROM

Browsers
ChatGPT, Claude, Gemini tabs

Local apps
Claude Desktop, ChatGPT app

Agentic browsers
Dia · Comet

→ GENAI CLOUD APPS

Sanctioned
routed with policy

Coached
user shown alternative

Blocked
logged to Risk Register

WHAT
Domain-level access control for AI apps. Block, coach, or quota-limit at network egress.

DIFFERENT FROM GATEWAY
Gateway = your apps' outbound API calls. Firewall = your users' outbound web traffic.

INTEGRATES WITH
Zscaler · Netskope · Palo Alto — or runs standalone via Edge.

Discovery.

"Show me every AI tool in my org and the user's email next to it."

→ CONNECTED SOURCES

Identity Provider
Okta · Entra · Workspace

SaaS vendor APIs
ChatGPT-E · Copilot · Claude

Code repos
GitHub · GitLab

Cloud agents
Bedrock · Vertex · Agentforce

Edge telemetry
endpoint + browser

Firewall logs

DISCOVERY

Normalize → one asset record

Join every event on corporate email

Score risk · sanctioned vs shadow

Auto-trigger Red Teaming on new findings

→ PRODUCES

AI Inventory
CISO single screen

Risk Register entries
Governance

"Shadow AI 48h" report
executive PDF

WHAT

Six independent sources stitched into one inventory tagged by user.

PROVIDES

Visibility · per-user attribution · risk scoring.

STATUS

Connector layer in build. Identity Provider connector first.

Edge.

The parts of Ethana that live on the user's own laptop and browser · where AI traffic starts.

↑ WATCHES ON THE DEVICE

IDEs
Cursor · VS Code · Windsurf · Warp

Browsers
Chrome · Edge · Brave · Arc · Dia

CLI AI agents
Claude Code · GitHub Copilot · Gemini CLI

System layer
local proxy · osquery

→ SENDS BACK

Installed tools
Discovery

Policy verdicts
Audit Log

Block / coach the user
at the source

WHAT

On-device agent + browser extension + dev-tool config. Catches AI traffic at the source.

WHY A SEPARATE LINE

Different OS targets, MDM packaging, browser-store cycles, offline-first behaviour.

WHERE

Mac · Linux · Windows · Chrome · Edge. MDM-pushed via Jamf / Intune.

What we have. *What we're building.*

No dates, no quarters · just the two columns the board needs.

— WHAT WE HAVE

Gateway
multi-tenant LLM gateway in production, with routing, fallback, per-call cost tracking, and CallTrace.

MCP Broker
server registry, hosted runtime, per-tool-call tracing, admin UI · multi-tenant, in production.

Red Teaming
orchestrator with scoring, cost cap, 21 OWASP probes, and multi-turn attacks.

Guardrails
six native scanners · Secrets, PII, Prompt Injection, Jailbreak, Toxicity, Bias.

Immutable Audit Log
insert-only event store, multi-tenant.

Account Management
tenants, projects, RBAC, SSO via OIDC.

Cost & Budget tracking
per-tenant, per-project, with alert hooks.

— WHAT WE'RE BUILDING

Discovery
seven connector families · Identity Provider, SaaS APIs, code repos, cloud agents, endpoint, browser, SWG.

Edge
endpoint agent (Mac, Linux, Windows), browser extension, dev-tool config push for Cursor, Copilot, Claude Code.

AI Firewall
network-egress AI app control with DLP and per-user quota.

Governance
Policy Engine (OPA / Rego) with Signed Policy Bundles pushed to every surface.

Compliance Pack
evidence collectors for EU AI Act, ISO 42001, NIST AI RMF, MITRE ATLAS · one-click export.

FinOps
per-user / per-team token spend, GPU cost, dormant-license findings.

Enterprise features
SSO, SCIM provisioning, RBAC, on-prem deployment, audit retention.

Non-Human Identity (NHI) for agents
ephemeral scoped tokens, OAuth 2.0 Token Exchange / SPIFFE-style workload identity, on-behalf-of delegation. Agents stop reusing user credentials.

Compliance certifications
SOC 2 Type II, ISO 27001, HIPAA-ready · in progress.

CI/CD Red-Teaming Gate
the ethana eval action for every pull request.

A meaningful portion of what we're building is *extending live production code* · not greenfield invention.

Where AI lives *today*, and where it will live *tomorrow*.

The number of places AI runs is multiplying. The suite is designed so a new surface is a connector, not a new product.

— TODAY

Surfaces we cover now.

Server-side LLM apps
apps using our Gateway

MCP tool servers
any tool an agent calls

Self-hosted LLM stack
vLLM · Ollama · llama.cpp

Internal agents
LangGraph · CrewAI · custom

Audit & immutable event log

Policy & rate limiting

Red Teaming across Model · LLM-App · Agent

— EXPANDING INTO

Adjacent surfaces next.

Browsers
Chrome · Edge · Arc · Dia

Endpoint devices
Mac · Linux · Windows

Developer tools
Cursor · Copilot · Claude Code · Aider

Code repositories
GitHub · GitLab

Cloud-hosted code
Codespaces · cloud IDEs

SaaS AI vendors
ChatGPT Enterprise · Copilot · Claude

Cloud agents
Bedrock · Vertex · Agentforce

Enterprise AI agent builders
Lyzr · others

Secure Web Gateways
Zscaler · Netskope

— EMERGING

Surfaces forming now · we will adapt.

Native AI hardware
OpenAI's planned device · Humane · Rabbit · Friend

OS-level AI
Apple Intelligence · Gemini on Android & Pixel · Copilot+ PCs · Galaxy AI

Computer-use agents
Anthropic Computer Use · OpenAI Operator · Project Mariner

Agentic browsers
Dia · Comet · Brave Leo · Opera Aria

Voice & multimodal agents
ChatGPT Voice · Gemini Live · Sesame · Hume

Humanoid robots
Tesla Optimus · Figure · 1X · Apptронik · NVIDIA GR00T

Vehicles & autonomous mobility
Tesla FSD · Mobileye · embedded edge inference

AR/VR with AI
Apple Vision Pro · Meta Quest · smart glasses

Enterprise digital workers
Devin · Copilot agents · Agentforce

Industrial & embodied AI
warehouse, retail, field robotics · drones

Smart home with AI
Alexa+ · Google Home Gemini · Matter devices

Wearables with AI
smart watches · rings · earbuds

DEPLOYMENT

Runs where the customer *needs it*.

Same suite. Three shapes. Enterprise features standard.

HOSTED

Ethana Cloud

We run the suite. Customer plugs in connectors.
Self-serve onboarding.

BEST FOR · PILOTS · SMB

ENTERPRISE FEATURES · INCLUDED

Single Sign-On	OIDC and SAML
SCIM Provisioning	automatic offboarding across every AI vendor
Role-Based Access Control	custom scopes per product
Immutable Audit Log	retention controls + SIEM forwarding
On-Prem Deployment	supported
Compliance Evidence Export	one-click PDF for auditors

PACKAGING

Suite · Sentry + Build + all platform services. Standard motion.

Sentry only · customer just has the Shadow AI / employee problem.

Build only · customer just builds AI apps and wants Gateway + Guardrails + MCP Broker.

CUSTOMER VPC

In their cloud

Same product in the customer's AWS, Azure or GCP. Their own database, identity provider, model keys. Data never leaves their account.

BEST FOR · REGULATED MID-MARKET

ON-PREM

In their data center

Deployed inside the customer's data center.
Enterprise features standard.

BEST FOR · BFSI · HEALTHCARE · PUBLIC SECTOR

Unify AI security *under one platform.*

A real and urgent enterprise problem. A platform that already runs. A natural path from where we are to where the category is going.

— THE OPPORTUNITY

A new line item in every enterprise security budget next year.

— OUR EDGE

The only suite designed to cover every surface AI runs on · today and tomorrow · and on-prem capable from day one.

— WHAT WE NEED

Greenlight the suite. Line up design partners. Move.

Ethana.

THE UNIFIED AI SECURITY SUITE FOR THE ENTERPRISE.
